in the first edition of this classic text roger haines devised a simple building block method which enabled students to quickly learn about the operating principles and applications of all the basic devices and subsystems used in hvac control the new fifth edition completely revised by douglas hittle takes into account the many technological changes that have arisen since then crystal clear guidelines on combining control devices circuits computers and hvac equipment into efficient control systems that are accurate and energy efficient are presented along with hundreds of charts and illustrations which provide data critical to the understanding and design of modern hvac systems these include psychrometric charts and tables relating to optimal levels of temperature and humidity at specific altitudes block flow diagrams which show control component function circuit diagrams of important electrical control system components schematic diagrams showing the configuration of various control systems

there are two reasons why we have a new edition every four or five years the first is that technology changes chapter 10 on computer based controls has had to be almost completely rewritten fundamentals don't change but the tools available to us do change evaluation and proper use of those tools makes it even more imperative that we understand fundamentals many of our control problems stem from the use of new devices as a solution to problems that are in fact control design errors new gadgets for example direct digital controls ddc will not solve basic problems and may even compound them none the less you will find an extensive discussion of ddc because i think it is the probable future in hvac control but it must be applied with a good understanding of fundamentals the second reason is that i keep learning and need to pass on my new and improved understanding to my readers thus you will find a number of small but important revisions a dissertation on control modes and a much more detailed discussion of how electronic control devices work there are a few places where i have corrected what i now perceive to be errors i apologize for these i have been much encouraged by the acceptance of this book in the past and i hope that this new edition will be helpful thank you for your support

residential buildings have continuously improved in energy efficiency partly as a consequence of the introduction of energy regulations in many countries although better thermal properties and systems efficiency have lowered energy consumption for space heating in recent decades substantial differences in energy consumption in similar dwellings are still being observed these differences in consumption are thought to be caused by differences in occupancy patterns by quality of construction and by rebound effects this research addresses the effect of energy performance regulations and occupant behaviour on energy consumption for space and water heating in dwellings built after the introduction of the energy performance regulations in the netherlands the results of this research show that improving the energy efficiency of buildings alone is not enough to decrease that energy consumption
